

“ Client Testimonial

Safe dig Vacuum Excavations have always provided BMD with excellent service and assistance in completing the projects they were contracted for. The team is punctual and reliable, providing experienced workers with new machinery which limits breakdowns and delays. The team have fully implemented safety systems, supplying Safe Work Method Statements, Safety and Environmental Plans, and accurately recorded safety statistics specific to each job they take on.

I can confidently recommend Safe Dig Vacuum Excavations as a reliable and reputable sub-contractor whom produce high quality work, follow direction and technical specification, and conduct themselves in a professional and safe manner at all times. ”

David Stanworth, CQ Project Area Manager, BMD Urban

“ Client Testimonial

We have been doing business with Safe Dig Services for over 5 years, assisting us with Vacuum Excavations around Brisbane and parts of Mackay and they have been nothing but Professional and organised in their job. From booking a job, to getting to the site on time, to finishing the job in the defined time, Safe Dig has proven to tick all the boxes. The team are reliable and have all safety plans, Quality management systems, Work method statements in order and up to date. I highly recommend Safe Dig services to anyone that wants to get their job done with peace of mind. Like how they put it, “One Name says it all!” ”

John Delaney, Plant Manager, Shamrock Civil Engineering

VACUUM EXCAVATIONS

SERVICE LOCATING

CIVIL SERVICES

JETTING

Safe dig, the name that says it all

■ Founded in 1994, Safe Dig Services has expanded rapidly over the years, starting with two humble trucks, to our current fleet of over 30 vehicles. With our impeccable track record and extensive knowledge serving the Australian community, Safe Dig Services have over 20 years' experience in the Hydro Excavation, Construction and Telecommunications industry. We are proud to have based our success on strong management and relationships with many of Queensland's top-tier companies and regional councils.

Safe Dig Services prioritizes safety above all. All staff are well trained, qualified and licensed in handling jobs big and small.

“ VISION STATEMENT:

Through our unfailing commitment to achieving the best results for our clients, we will be the supplier of choice of innovative, accurate, efficient, and safety focused services, both big and small, in the Civil Construction industry ”

VACUUM EXCAVATIONS

Vacuum excavation uses high-pressure water jets to break up solid ground, whether it's sand or clay, rocks or soil and simultaneously vacuums the debris away, into a holding tank, for disposal after a job is completed. This is a non-invasive, cost effective and accurate way to visually locate underground utilities prior to excavation and reduces the risk associated with damaging these assets.

OUR VACUUM TRUCKS

- Potholing
- Industrial Vacuum
- High Pressure Gurney
- 3000L, 4000L, 5000L and 8000L trucks (for all jobs big and small)
- General Excavations
- Pump outs

SERVICE LOCATING

When locating services, our main goal is to avoid damage from accidental excavation. With the latest in vacuum excavation technology, as well as 2D ground penetrating radar, your services are guaranteed to be located easily and safely. The Safe Dig Underground Service Location experts can help you locate; core infrastructure including water, gas, telecommunications, sewer or underground power by using the most up to date Ground Penetrating Radar (GPR).

OUR LOCATING EQUIPMENT

- DBYD Plan Research
- Cable Locations (ED WAND)
- 2D Radar
- Telstra and DBYD Accredited

CIVIL SERVICES

Safe Dig Services can take away the worry of a messy job with our Excavators of varied sizes and different attachments to tackle any job. Safe Dig can assist in levelling out the ground, managing dust, clearing out confined spaces with the assistance of push cameras and even move large stumps. We can assist with your job whether big or small.

CIVIL SERVICES

- Excavators (with/without mulching attachment)
- Bobcats
- Remote Control Dingo
- Water Trucks (9000 L - 13000L)
- Push Cameras

JETTING

Jetting uses high pressure water technology passing through a hose & nozzle to effectively clear conduits of debris, scales, encrustation or dislodge sand/sediment & move it to a point where it can be expunged from the pipeline system.

JETTING

- Vac- Jetter Combo Truck - 120L per minute / 2500 psi
- Trailer mounted - 180L per minute
- Jetter Truck - 180L per minute
